Swiss Palliative Care Database (SwissPall)

A tool to better define the needs of palliative care patients in Switzerland

Steffen Eychmüller and Maud Maessen, University Center for Palliative Care, Bern

Sophie Pautex, service de médecine palliative, HUG
on the behalf of the SwissPall research platform

SwissPall 1.0: the 'triple- role'

- A **Palliative care documentation system** owned by palliative ch
- A **tarife** project (sponsored by FOPH (BAG))
- A **research** project (sponsored by SAMW)

Inspired by

Aims

- 1. To demonstrate the feasibility of a palliative care dataset in Switzerland.**
2. To assess basic demographic data of patients in palliative care settings.
- 3. To compare variation of patients admitted in PCU across regional, patient and care characteristics.**
4. To compare characteristics of patients in terms of oncological and non-oncological disease.
5. To better characterize the patient's trajectory with special attention to emergency hospitalization.
6. To better characterize the management/ therapeutic approach in the different PCUs across Switzerland, and to verify existing quality criteria for structure ("Versorgungsstrukturen spezialisierte Palliative Care Schweiz") as agreed on a national level.

SwissPall research aims, selected

1. To demonstrate **feasibility** of a palliative care cohort in Switzerland
3. To compare **variation** of patients admitted in PCU across regional, patient and care characteristics.

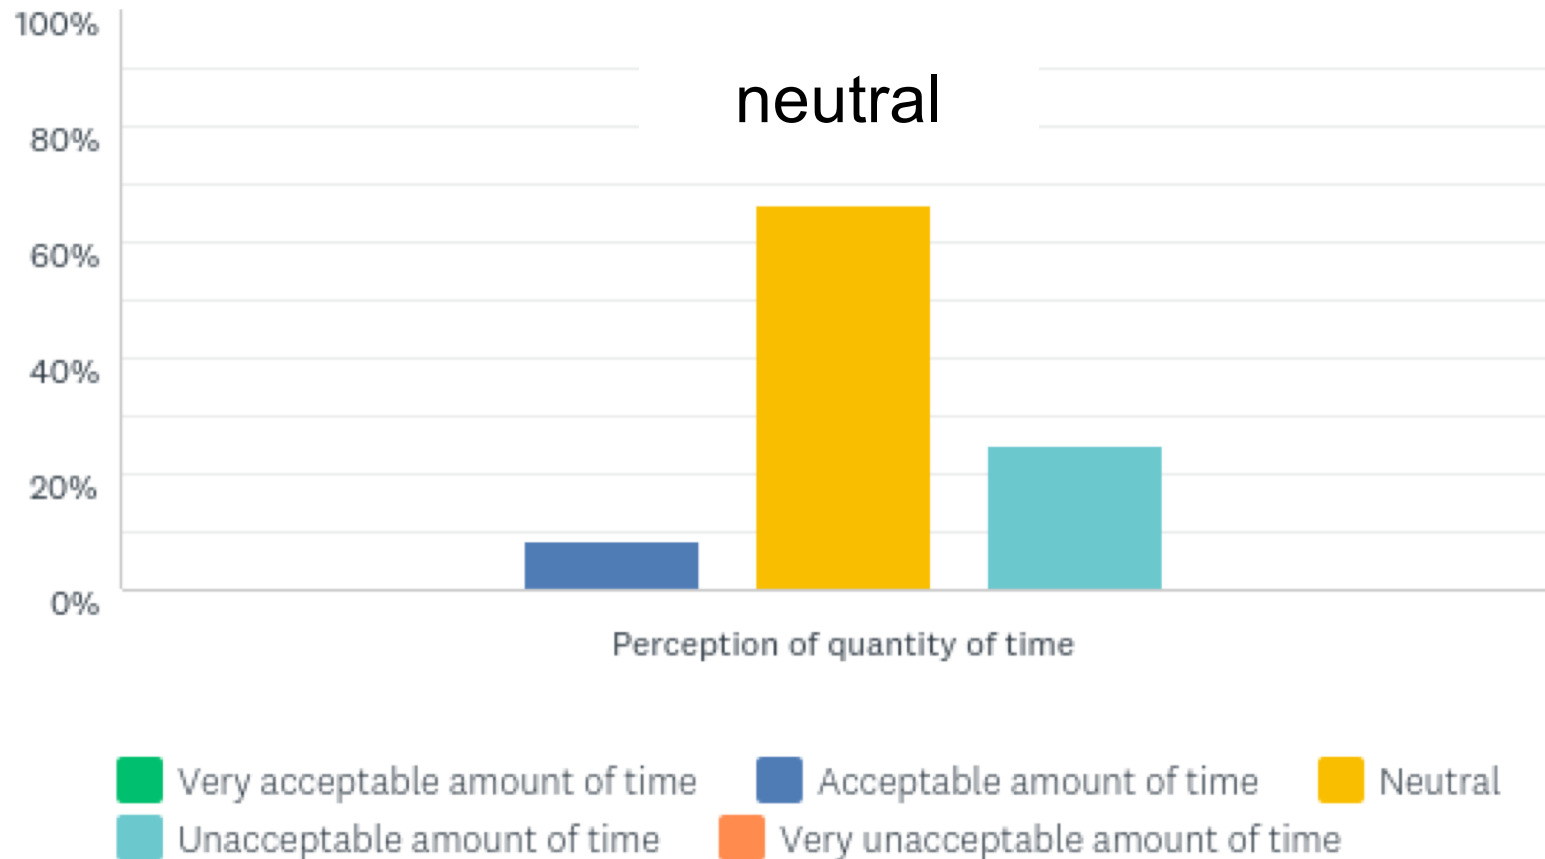

SwissPAll 1.0 participants

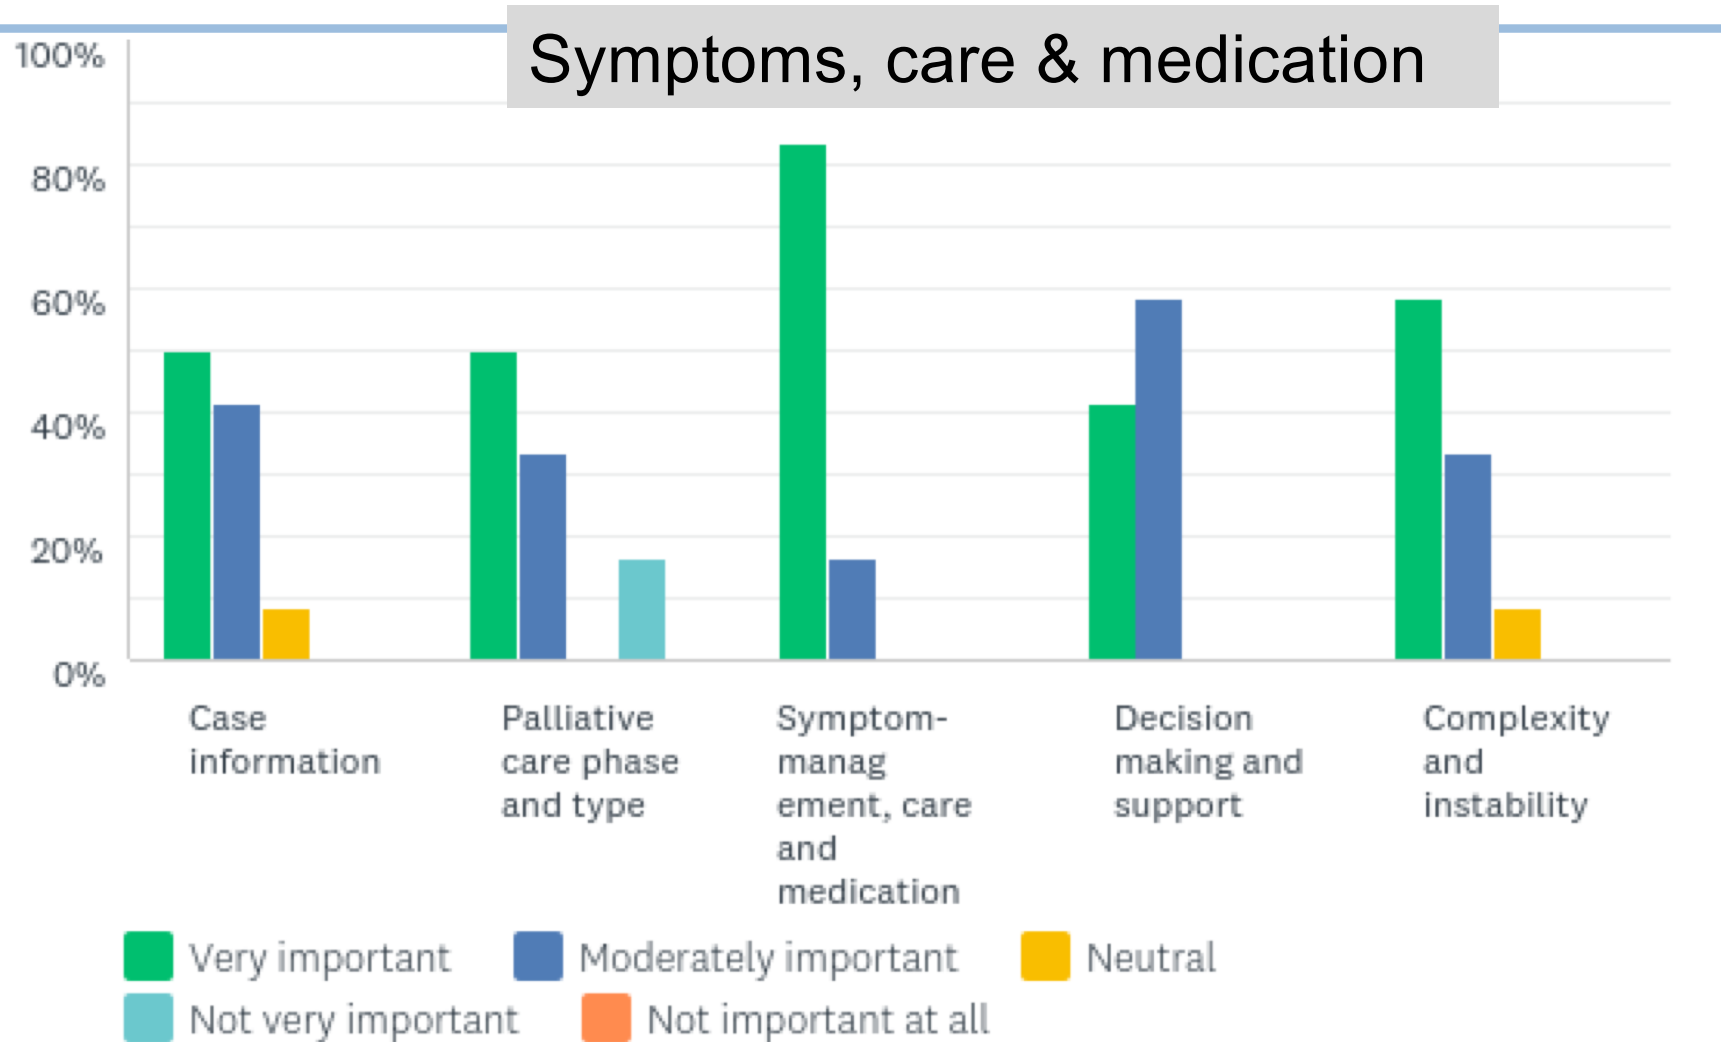

| PCU | N |
|--------------------------|------------|
| Hospiz im Park | 131 |
| Inselspital Bern | 77 |
| Hôpital de Lavaux | 39 |
| HUG Genève | 38 |
| Spital Affoltern | 37 |
| Kantonsspital St. Gallen | 29 |
| St. Gallen - Flawil | 25 |
| Gesamt | 376 |

SwissPall Feasibility: quantity of time spent completing a questionnaire (Survey 2017)

Importance of the five modules (Survey 2017)

SwissPall results: characteristics of a specialist Palliative Care patient in Switzerland

Average Swisspall patient (n=379) is:

- > 73 years old (**range 23 – 96**)
- > female (54%)
- > Ref./protestant (43%)
- > With cancer (61%) – **non- cancer 39%**
- > Delir at admission (18%)
- > 30% emergency admission
- > Wish to die with increased care (5%)

Results: Admissions and discharge

Admission (%)

■ Home ■ Hospital ■ Rehab ■ Other

Discharge (%)

■ Home ■ Hospital ■ Rehab ■ Other ■ Death

Admissions and discharge ff

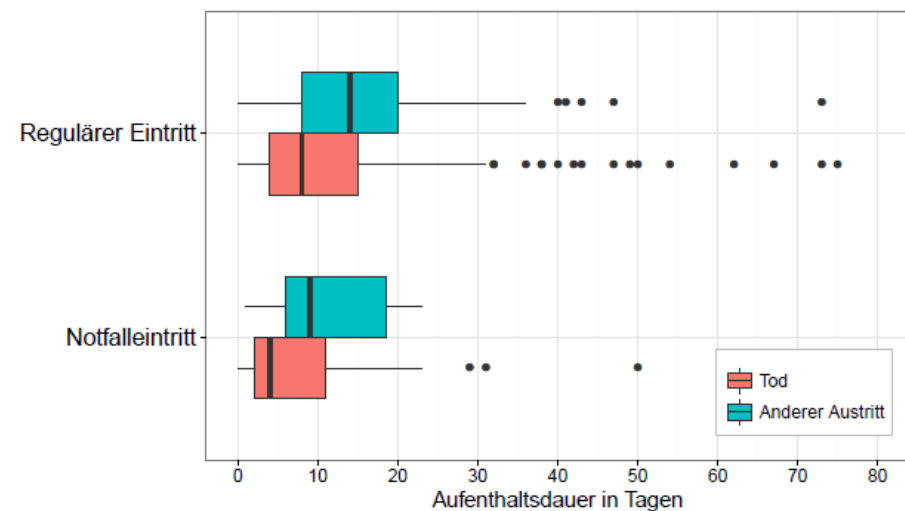

Diagnosis: Cancer (61%) – Noncancer (39%)

| | Admission (%) | | Discharge (%) | | |
|----------|---------------|--------|---------------|--------|--------|
| | Non cancer | Cancer | Non cancer | Cancer | |
| Home | 40 | 37 | 14 | 20 | P<0,01 |
| Hospital | 54 | 49 | 1 | 3 | |
| Rehab | 1 | 5 | 2 | 0 | |
| Other | 4 | 10 | 11 | 12 | |
| Death | | | 72 | 65 | |

Variations 1: Length of stay

| PCU | N | Median | Min | Max |
|--------------------------|-----|--------|-----|-----|
| Hospiz im Park | 119 | 5 | 0 | 93 |
| Inselspital Bern | 67 | 10 | 0 | 35 |
| HUG Genève | 38 | 13 | 1 | 73 |
| Spital Affoltern | 35 | 13 | 1 | 35 |
| Hôpital de Lavaux | 30 | 9 | 1 | 75 |
| Kantonsspital St. Gallen | 29 | 11 | 0 | 43 |
| St. Gallen - Flawil | 25 | 13 | 1 | 27 |
| Gesamt | 343 | 9 | 0 | 93 |

Conclusions

PCU's acknowledge importance of a Swiss Pall Dataset
SwissPALL 1.0 was overloaded as a 'triple – project'
Feasibility: needs extra effort → Participation: low

SwissPall database shows clear variations (regional, institution)

- Performance status at admission
- Length of stay
- Advance directives
- Dying in PCU

crucial for politics,
finances/ tariffs

future

SwissPALL 2.0

- Create a larger and longitudinal Swiss palliative care cohort
 - Simple, Web-based, owned by institutions/ participants
 - See PCOC.....
- Participation of ALL certified specialist palliative care institutions including mobile teams and specialist longterm
- Robust funding and professional hosting (including clever technical solution)
 - Invitation from Bern for kickoff 2.0 in January 2020
